**Retrofit for
Aviation Aid Systems**

Aviation Aid Systems for Wind Turbines: The REETEC Retrofit Solution

Our cost-effective retrofit solutions are state of the art for retrofitting your aviation aid systems. We offer turnkey solutions individually tailored to your systems – including professional installation. A win-win situation is also created by synergies in connection with other measures, e.g. simultaneous leaf inspections, DGUV V3 inspections or general plant inspections.

Regardless of location, our retrofit solutions meet both local and international guidelines and requirements:

- _ AVV (FVT) for Germany
- _ STAC for France
- _ ICAO A, B and C for international aviation guidelines
- _ Further approvals have been applied for

Would you answer one or more questions with „Yes“?

- _ Keyword “repeated troubleshooting, frequent failures” – do you have a high cost to keep your current systems in operation?
- _ Are your Aviation Obstruction Marker Systems no longer or only partially compliant with current legislation?
- _ Have the LED luminaires reached the end of their service life?
- _ Do you have to switch to on-demand night-time marking (German: BNK)?
- _ Are you considering voluntary conversion for energy and environmental reasons?

Then we can give you eight good reasons for our retrofit solution:

- _ Independent of manufacturer and system – one size fits all
- _ Modular “plug’n’play” system, therefore easy to adapt to new guidelines and laws and expandable for future functionalities
- _ Compatible with all current radar systems of night-time marking (German: BNK) such as Parasol, Airspex, Quantec
- _ Compliant with numerous directives and legislation
- _ Freely configurable synchronisation with neighbouring systems or parks
- _ Central control unit including web-based operating and monitoring screen
- _ Low maintenance
- _ Turnkey solution including on-site installation
